NO DATA LOSS AND NO POS DOWNTIME. ALWAYS ON – RELIABILITY ASSURED.

Powerful software redundancy algorithm has been built into the system to ensure a smooth operation always and all the time. In case of shutdowns, return to normal operation requires minimum management intervention and is an automated process. **While there may be many POS installed at any one site, Byte offers the flexibility which** enables each machine to service independently and also on a networked environment. The switching is automatic and intelligent depending on the network availability and ensures that data remains safe and intact.

Byte's system ensures that your business will never be hampered by a critical hard-drive failure or any other such hardware or software problem. You may mirror your data on a back-up server or use the computer at one of your POS stations to create a fully redundant system.

CENTRAL COMMAND CENTER - CAPABILITIES FOR MULTI SITE MANAGEMENT

One of the most powerful features offered is multi location management. **Byte** is an ultimate time and cost saver for organizations/owners managing multiple restaurants/ locations/franchises/concepts. You will be able to:

- Perform updates automatically.
- Eliminate redundant data entry and duplication of efforts.
- Implement changes in configuration with ease.
- Save considerable time and effort
- Facilitate data management from a single workstation – increase accuracy and efficiency

The solution offers built in interfaces and modules to communicate over a network. Automatic information packets are developed and may be sent over email or through any other medium to a centralized server for data synchronization. There is tremendous cost saving due to automatic Menu updates and Setup configuration changes which can be done with ease at all locations.

Adding new deals, discounts, special offering is now quick and easy. You can now focus on what you should do best – i.e service your customers for a better and rewarding restaurant experience.

BYTE MENU CONFIGURATION & MANAGEMENT

The solution has been designed to support multilayer menu design offering options to change button position, Size, Colors, Assign multiple functions to each button; paste deal pictures to help in button identification & save time, design unlimited menus for any restaurant environment or simply add items on the fly.

POWERFUL BACK OFFICE APPLICATION SUPPORT

A major strength of our (**Byte**) product suite is the support which it derives from the back office ERP modules for Financials, Payroll and Supply Chain Management - (SCM covers Purchasing, Inventory management, transfers & costing)
